

Model Architecture

RAG technique has been adopted

Open Source Models utilized

- Hugging Face Embeddings
- Hugging Face LLM

I am sorry that I couldn't complete the assignment. I have my end semester examinations going on, hence had to dedicate my time in preparing for my exams. Overall this assignment was a great learning experience and I would have loved to complete it and display the analysis using a web application, if not for my exams. The points and the different types of insights that can be derived from the 10-K filings have been added in the jupyter notebook.

For each of the given user-segments different forms of insights can be extracted, and I would surely complete my analysis once my exams end.

I am looking forward to working and learning with the esteemed team of Fintech Lab at Georgia Institute of Technology

Thank You
Shiv Patil
